Will do - we're on a call with Utah folks at the moment, I'll step away and give you a call before the top of the hour.

Randy:

Sorry, a couple more notes, let me know if these are/aren't helpful.

Harlan mentions that they are having a little trouble 'matchmaking' between folks who want to donate water and folks who have the capacity to receive it. I don't know if that's something we can assist with.

The PIO here also had a suggestion: he didn't feel like EPA has focused in discussions with the community enough on why we were at the mine in the first place. He thinks that we might be able to begin to rebuild credibility with the community if we crafted some talking points that begin there - EPA was at Gold King Mine to clean up contamination; EPA has been working with Navajo Nation to address uranium and other contamination for years, and we will continue to engage meaningfully with the Nation to address this new contamination issue, relying on both experts within the Navajo nation and experts at the EPA.

Jared called and asked if I could find out where USDA and Navajo Dept of Ag are in the response, I'll ask Josh Allen when he gets here in a bit. He also asked if I could find out from folks here if there might be a culturally appropriate way to reopen the river, when that time comes. I'll do some asking around and let you know if I come up with some good advice. David Yogi might also have a good source of advice in Secody.

More soon,

LE

Let's talk today. Laura will report to Bret and Randy. They should decide where they want her.

I thought we could all talk in the next hour if you like. I can set it up.
